Many People Waited in Court Room for Verdict of Jury Which Reported at 10 O'clock Last Night.

The jury in the case of the State against Owen J. Burns on a charge of burglary of the Jackson bank at Clearmont brought in a verdict about ten o'clock last night of acquittal. The verdict was as follows:

Blagg for the defense, and Prosecuting Attorney Charles McCaffrey closing the arguments. Mr. McCaffrey spoke during the supper hour from six to seven o'clock and many people remained in the court room to hear him.

FIVE REASONS FOR TESTING SEED CORN.

The average Missouri farm has 25 acres of corn with an approximate stand of 72½ per cent. This means that on every Missouri farm there 5.87 slacker acres in every 25 acres of corn

By a germination test of every seed ear, a perfect stand as far as seed is concerned can be had. Allowing 12½ per cent decrease for unavoidable losses, wind, weather, and pests, a gain of 15 per cent of corn is still possible as a result of testing.

This additional 15 per cent of corn would mean approximately four and one half bushels per acre. On the average farm this would mean 122 bushels.

It costs approximately five cents an acre to test each ear of seed corn

Individual tests are absolutely necessary to attain maximum production.

These are the five reasons urged by the University of Missouri college of Agriculture to show why seed corn should be tested before planting. After all, the appearance of the ear is not final—it must have good germinating qualities.

Only Essex Shares Hudson's Qualities

They Show Why Essex Went 3037 Miles in 50 Hours, and is Rightful Runner-up to the Super-Six Performance

A critical public has judged the Essex.

In the year past it set a world's sales record.

More than $35,000,000 was paid for 22,000 Essex cars now in service.

That shows how men wanted what Essex offered.

Now Essex proves the accuracy of motordom's judgment.

Let the official tests speak:

On the Cincinnati Speedway a stock chassis Essex made a new world mark of 3037 miles in 50 hours, under observation of the American Automobile Association.

With other trials the same Essex ran a total of 5870 miles in 94 hours, 22 minutes driving time, averaging over a mile a minute.

Still another Essex phæton holds the world's 24-hour road mark of 1061 miles made in the face of a blizzard over snow-covered Iowa country roads.

The Essex and Hudson are of course totally different types.

But note the advantages Essex shares with Hudson.

Both Have This Motor Heat Control

For instance, the radiator shutters by which efficient operating heat is maintained in coldest weather. They mean everything to satisfactory winter driving. Closed, they keep the heat in.

No unsightly hood covers are needed. They give summer efficiency to gasoline. They end hard starting. And in warm weather, opened, they give the maximum cooling.

When you know the Essex you will want one. But you should place your order in advance if you would avoid disappointment in delivery.

The Essex, of course, does not cost as much as the Hudson, and though it is admittedly the runner-up in performance, it can never be all the Super-Six is.

In speed — in acceleration — in hill-climbing — in endurance — no stock car ever matched Hudson's famous records.

The Super-Six motor reduced vibration more than any other type. It checked the most destructive force automobiles must contend with. It added 72% to power, and almost doubled efficiency. And it made the Super-Six the largest-selling fine car in the world.

Supreme in Motor and in Design

But performance is not Hudson's only title to leadership. From the first it has set styles that the motor industry accepts.

It is a creator of coach design. Not only America but Europe reveals its influence in motor style. Models that are now standard with all fine cars were first introduced by the Hudson Super-Six.

Eighty thousand Super-Six owners place Hudson endurance above all its other notable qualities. For durability must always be the most important car advantage.

The Super-Six motor has proved the dominant factor in car endurance. None except Hudson can use it. If you would own all the supreme advantages of speed, power, acceleration, plus endurance, for which the Super-Six motor accounts, you must choose Hudson.

Weigh the facts.

What can any fine car give to compensate for lack of the Super-Six motor?
